Over 1 million times per year, Biomet helps one surgeon provide personalized care to one patient.

The science and art of medical care is to provide the right solution for each individual patient. This requires clinical mastery, a human connection between the surgeon and the patient and the right tools for each situation.

At Biomet, we strive to view our work through the eyes of one surgeon and one patient. We treat every solution we provide as if it’s meant for a family member.

Our approach to innovation creates real solutions that assist each surgeon in the delivery of durable personalized care to each patient, whether that solution requires a minimally invasive surgical technique, advanced biomaterials or a custom, patient-matched implant.

When one surgeon connects with one patient to provide personalized care, the promise of medicine is fulfilled.
Neurosurgical Solutions

Biomet Microfixation supports one surgeon providing care to one patient everyday with our innovative line of cranial closure and reconstruction product for neurosurgery. Our commitment to impacting patients’ lives starts with thoughtful design, rigorous testing, as well continuously seeking opportunities to provide best-in-class care that benefits the patient, the surgeon, and the hospital.

HTR Patient-Matched Implants

This commitment starts with the most complex cases for cranial reconstruction due to tumor, trauma, or deformity. Utilizing 3-D imaging, HTR provides patient-matched implants that can be designed with four different fit profile options for a truly custom solution.

HTR-PMI is designed to provide:

- Four fit options
- Implant pre-plating
- Simplified CT data transfer through FTP and PACs
- Porous nature of the implant permits fibrovasacular ingrowth and potential for bony attachment
- Hydrophilic properties allow for pre-operative antibiotic solution bath

---

Biomet has many different patient-matched products and we strive to provide personal care to each and every patient. Since 1993, Biomet Microfixation has made nearly 15,000 HTR-PMI implants.

HTR-PMI Patient-Matched Implants are made from non-resorbable biocompatible material composed of polymethylmethacrylate (PMMA) spherical macrobeads that are coated and fused together with polyhydroxyethylmethacrylate (PHEMA). Both PMMA as well as PHEMA have been well known, investigated and successfully used clinically for more than 50 years.

FRONTAL DEFECT

LEFT DEFECT

MULTIPLE DEFECT

FRONTAL AND MINI ORBITAL DEFECT
Proven Clinical History

Since 1992, Biomet has provided patient-matched cranial implant solutions.

Indication

HTR-PMI (Hard Tissue Replacement) Polymer Implants are intended for reconstruction and augmentation in craniofacial procedures to fill voids or defects in bone resulting from disease, traumatic injury or surgical trauma. These devices can be used in aesthetic reconstructive procedures where augmentation or change in bony contours is desired.

Features

**Patient Specific Anatomic Fit:** HTR is designed and manufactured based upon uncompressed DICOM CT data.

**Hydrophilic:** Enables antibiotic impregnation pre-operatively and vascular flow post-operatively.

**Porous:** Average pore diameter of 250-500 microns supports possible connective tissue and bone ingrowth.

**Rigid and Strong:** Implants have a rigidity similar to bone, with a compressive strength of 5,000 psi.

**Radiopaque:** Implants can be conveniently and accurately monitored post-operatively.

**Negative Surface charge:** May have minor positive effects on bony ingrowth and inhibition of bacterial adhesion.\(^2\)

---

Advantages

- Prior to surgery, the implants can be soaked in antibiotic.
- HTR is shipped sterile to save time prior to surgery.
- HTR can be contoured intra-operatively with standard craniotomy burrs.
- Screws and plates can be placed during surgery. A pilot hole must be drilled within 4 to 5mm from the implant perimeter prior to screw insertion.
- Complimentary pre-plating service that saves O.R. time.
- Two sterile implants are provided for each defect.

---

Implant Fit Options

Biomet Microfixation is the only patient-matched cranial implant company that offers four available versions of the HTR implant. Our design algorithm technology provides surgeons with the flexibility and confidence that each patient can receive an optimal fit.

Custom Fit
This design allows for a tight fit (pre-plating recommended). The implant is 4-8mm thick based on the patient's anatomy with a tapered edge to offer a smooth transition to the bone.

Standard Fit
This design allows for some calcified tissue to remain along the craniectomy walls while still providing a tight custom fit. The implant is 4-8mm thick based on the patient’s anatomy with a slightly blunt edge.

Reduced Fit
This design allows for more fit flexibility with the post surgery anatomy. The implant is 5mm thick with a blunt edge and a 0.75mm gap.

Onlay Fit
This design allows the implant to sit directly on the bone surface to improve symmetry of the patient’s skull. The implant has a minimum 3mm thickness and can be as thick as 5mm. It is designed with a tapered edge to offer a smooth transition to the bone.
HTR-PMI PROCESS FLOW CHART

1. UPLOAD/MAIL CT DATA WITH DESIGN INPUT REQUEST FORM (Please see FTP instructions)
2. MEDICAL MODELING DESIGNS A 3D RENDERING AND CREATES A MODEL OF PATIENT DEFECT FROM CT DATA
3. 3D ANATOMICAL RENDERING AND PATIENT MODEL SENT TO SURGEON FOR REFERENCE (Patient specific link and log-in info is sent to surgeon)
4. DESIGN APPROVED
5. PURCHASE ORDER RECEIVED
6. CASE DATE FINALIZED
7. MANUFACTURING
8. SHIPPING
9. SURGERY

PLATE SELECTION

1. **1.5mm Neuro Plates**
   - 4-Hole Straight Plate X-Long, 20mm 01-7048
   - 1.5 x 4mm Self-Drilling X-Drive Screw 91-6104

2. **ThinFlap Plates**
   - 6-Hole Straight Plate Long, 28mm 19-1040
   - 2x3-Hole Rectangle Plate 18mm 01-7136
   - 4-Hole Straight Plate Long, 22mm 19-1045
   - 2-Hole Straight Plate Long, 16mm 01-7347
   - 6-Hole Straight Plate Long, 27mm 01-7057
   - Double Y Plate 18mm 19-1060
   - Y Plate, 20mm 19-1065
   - 2x4-Hole Rectangle Plate 25mm 01-7114
   - 1.5 x 4mm Self-Drilling X-Drive Screw 91-6704

NOTE: Delivery of implant is dependent on receipt of customer data and surgeon approval time. Biomet is not responsible for delays in shipping that are not under our control.
HTR®-PMI CT SCANNING PROTOCOL

The quality of the CT scan is the most important aspect of creating case-specific anatomical models and prostheses. Biomet Microfixation and Medical Modeling understand concerns about keeping the radiation doses to patients as low as possible; therefore, please use these guidelines as appropriate for your patients. Please do not hesitate to contact our HTR hotline at 904.741.9242 with any questions.

KEY GUIDELINES

- Use a 3D scanning routine that provides high resolution images as comparable to image guided surgery, stereotactic planning, or other 3D applications.
- Acquire scans at a high spatial resolution. Series should be acquired with thin, contiguous image slices (equivalent thickness and spacing of 1.25mm or less) and as small a field of view (FOV) as possible while still including the patient’s external contour.
- Scan 2cm above and below the area of interest. For cranial defects, please include the entire defect plus 2cm above and below the defect. If unsure, please scan from hard palate through the skull vertex.
- Provide images in the original scanning plane. If software post-processing is performed to reorient or reformat the scan volume, then a series of thin slice images in the original acquisition plane MUST be included.
- Do NOT use a gantry tilt during image acquisition. Images acquired with gantry tilt and then post-processed to reorient images (i.e. “take out” tilt) are not acceptable.
- Please ensure that scans are free from motion artifact. Patient must remain completely still through the entire scan. If patient motion occurs, the scan must be restarted. Image distortion from patient motion can severely compromise the accuracy of a model.

Combining the Art and Science of Care

Founded by eight visionaries driven to improve the lives of patients, our philosophy has always been to approach every innovation as if it’s meant for a family member.

More than 30 years later, we still operate the same way, putting the patient-surgeon connection first while advancing surgical techniques and devices.

At Biomet, the tremendous advancements we’ve made in the past are the motivation for our future. We’ll continue to strengthen the patient-surgeon connection with solutions that combine clinical mastery and the human element.
What fascinates you about the body is also what drives us. That’s why we’re always pushing the boundaries of engineering to make products that help you keep the human form as glorious as it was intended. To learn more about our breadth of products, call 800.874.7711 or visit us online at www.biometmicrofixation.com.

We’d love to join you in a conversation about the future.
